## OFF-LINE SWITCHING REGULATORS - WITH POWER MOSFET OUTPUT

ABSOLUTE MAXIMUM RATINGS

FET Channel Temperature, $\mathrm{T}_{\mathrm{J}} \ldots \ldots . .+150^{\circ} \mathrm{C}$ Internal Frame Temperature, $T_{F} \ldots+125^{\circ} \mathrm{C}$ Operating Temperature Range, $T_{A}$. $-20^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$

[^0]These devices are specifically designed to meet the requirements for increased integration and reliability in off-line flyback (STR-S6401) and forward (STR-S6401F) converters operating in a fixed-frequency PWM mode. Each device incorporates the primary control and drive circuits with an avalanche-rated power MOSFET. Crucial system parameters such as switching frequency and maximum duty cycle are fixed during manufacture. The STR-S6401 and STR-S6401F differ only in their maximum duty cycle. Control circuit decoupling and layout are optimized within each device.

Cycle-by-cycle and average-current limiting, soft start, undervoltage lockout with hysteresis, and thermal shutdown protect the device during all normal and overload conditions. The performance and reliability of these devices, and their variable-frequency counterparts, has been proven in substantial volume production.

The requirements of high dielectric isolation and low transient thermal impedance and steady-state thermal resistance are satisfied in an over-molded, 9 -pin single in-line power package. Similar off-line switching regulators, with output ratings to 800 V at 5 A , are also available.

## FEATURES

- PWM Flyback Conversion or Forward Conversion
- Output Power to 250 W
- Pulse-by-Pulse Current Limiting
- Fixed-Frequency 100 kHz PWM
- Avalanche-Rated Power MOSFET Switch
- Soft Start

■ Internal Under-Voltage Lockout and Thermal Shutdown
■ Low External Component Count
■ Over-Molded SIP with Isolated Heat Spreader

Always order by complete part number:
STR-S6401 or STR-S6401F.

## TYPICAL CHARACTERISTICS

TYPICAL PWM FLYBACK CONVERSION USING STR-S6401
WARNING: lethal potentials are present. See text.

TYPICAL PWM FORWARD CONVERSION USING STR-S6401F
WARNING: lethal potentials are present. See text.

## APPLICATIONS INFORMATION

WARNING - These devices are designed to be operated at lethal voltages and energy levels.
Circuit designs that embody these components must conform with applicable safety requirements.
Precautions must be taken to prevent accidental contact with power-line potentials.
Do not connect grounded test equipment.
The use of an isolation transformer is recommended during circuit development and breadboarding.

The power MOSFET outputs of these devices are similar to the International Rectifier type IRFP448. These devices feature an excellent combination of fast switching, ruggedized device design, low on-resistance, and cost effectiveness.

Recommended mounting hardware torque:
$4.34-5.79 \mathrm{lbf} \circ \mathrm{ft}(6-8 \mathrm{~kg} \cdot \mathrm{~cm}$ or $0.588-0.784 \mathrm{Nm})$.
Recommended metal-oxide-filled, alkyl-degenerated oil base, silicone grease:
Dow Corning 340, or equivalent
